

V2 MARKETING BOOST

N3RD.FINANCE

Problem

The fair launch debate.

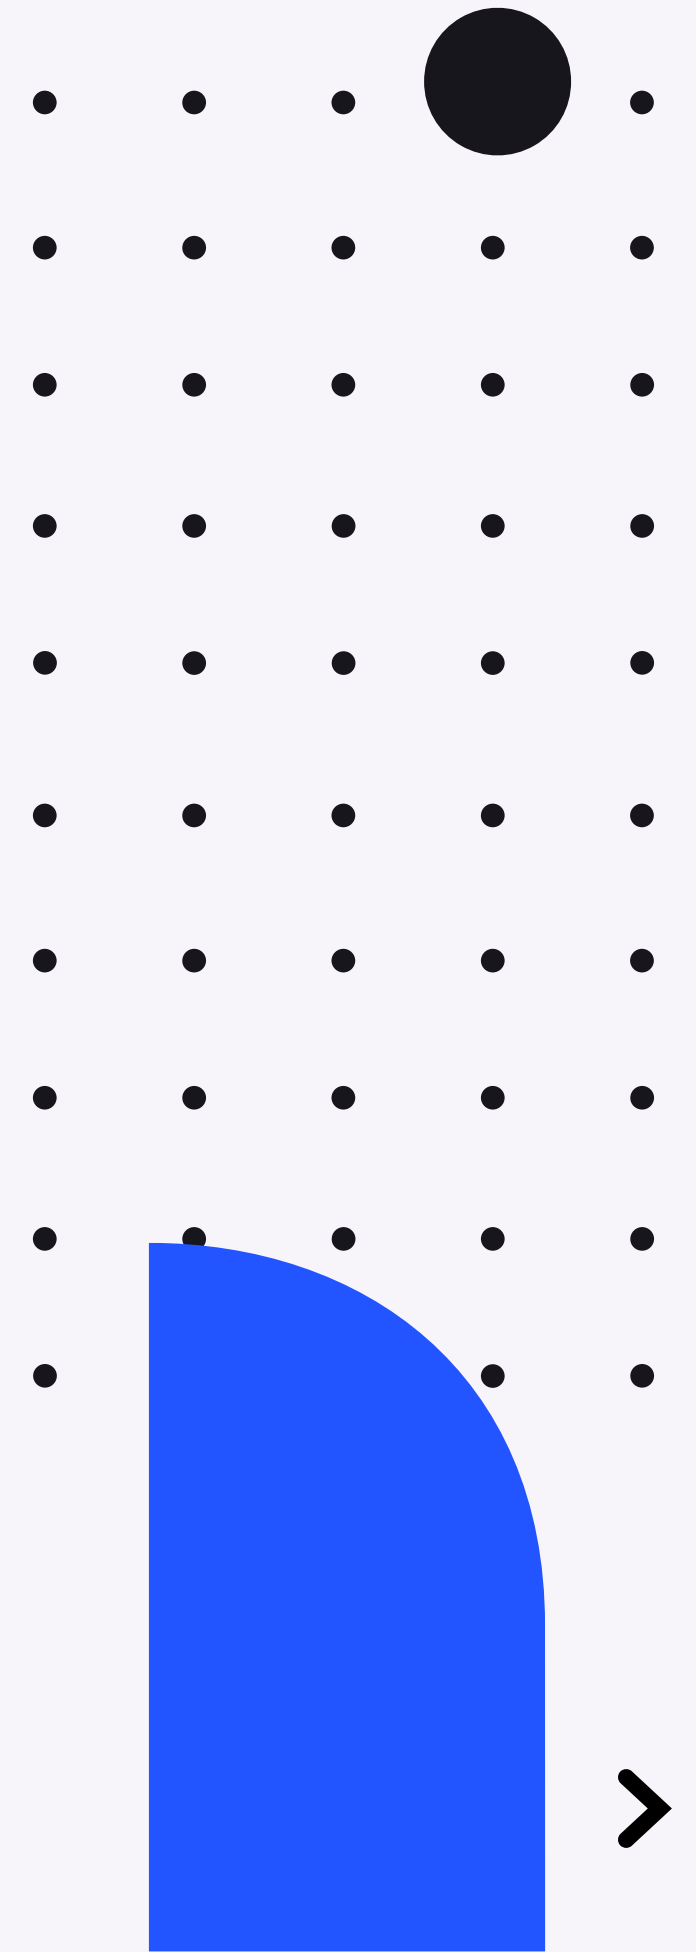

Lately, we saw a lot of debates in the crypto industry. Most noticeable was for the popular YFI project and the decision to mint 6666 more new coins to ensure projects growth and sustainability.

Like YFI, N3RD was fairly launched, so the community owns over 90% of the supply.

This can be both good and bad.

Let us elaborate. Starting a project without an ICO or VC funding is a great experiment, however, it has some drawbacks which can limit/slow down the growth of the project:

- Ⓝ less funding for development incentives
- Ⓝ less funding for marketing and growth

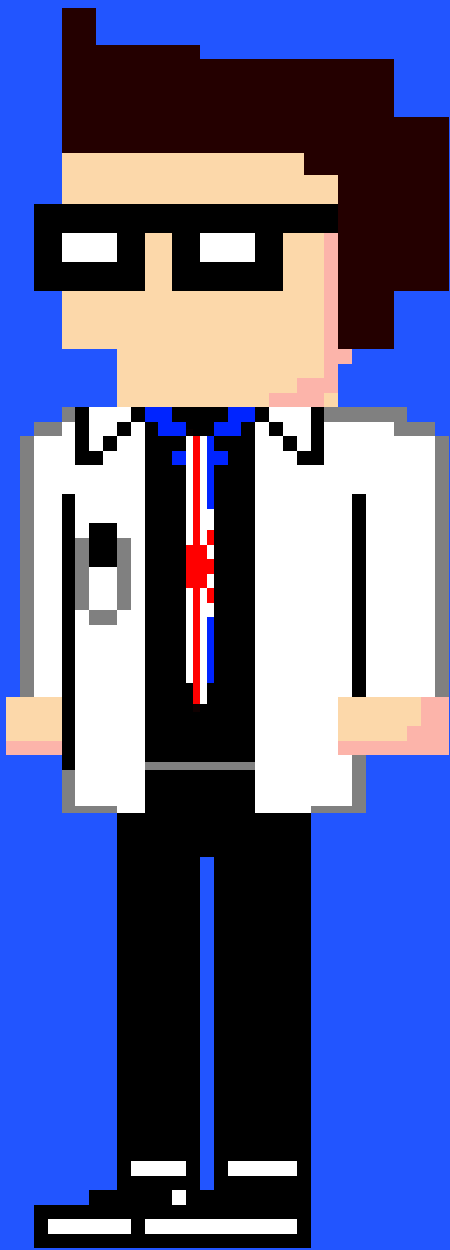

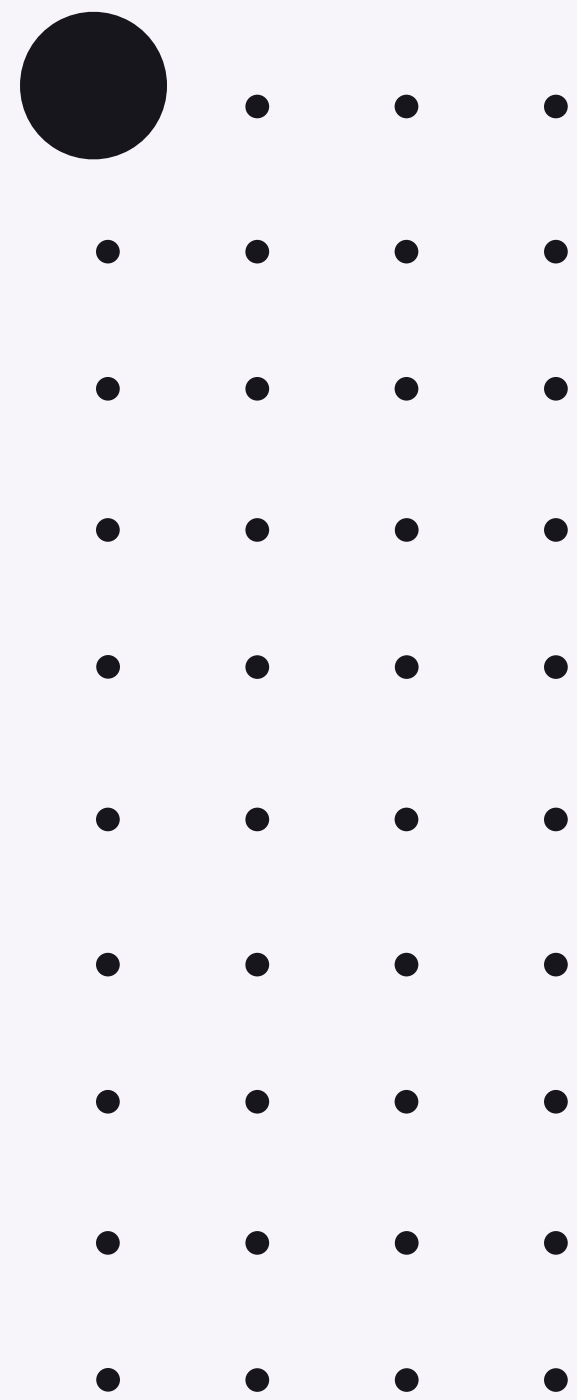

Solution

We at N3RD are very proud of the amazing growth of the ecosystem that we have achieved together with our savage community-the N3RDz FAM 🤝

We have established very good connections, while building our great product!

N3RD team has paid over 100,000 USD to support the marketing and we don't spare our personal funds either. (Meaning we will do the necessary for the project to be a success).

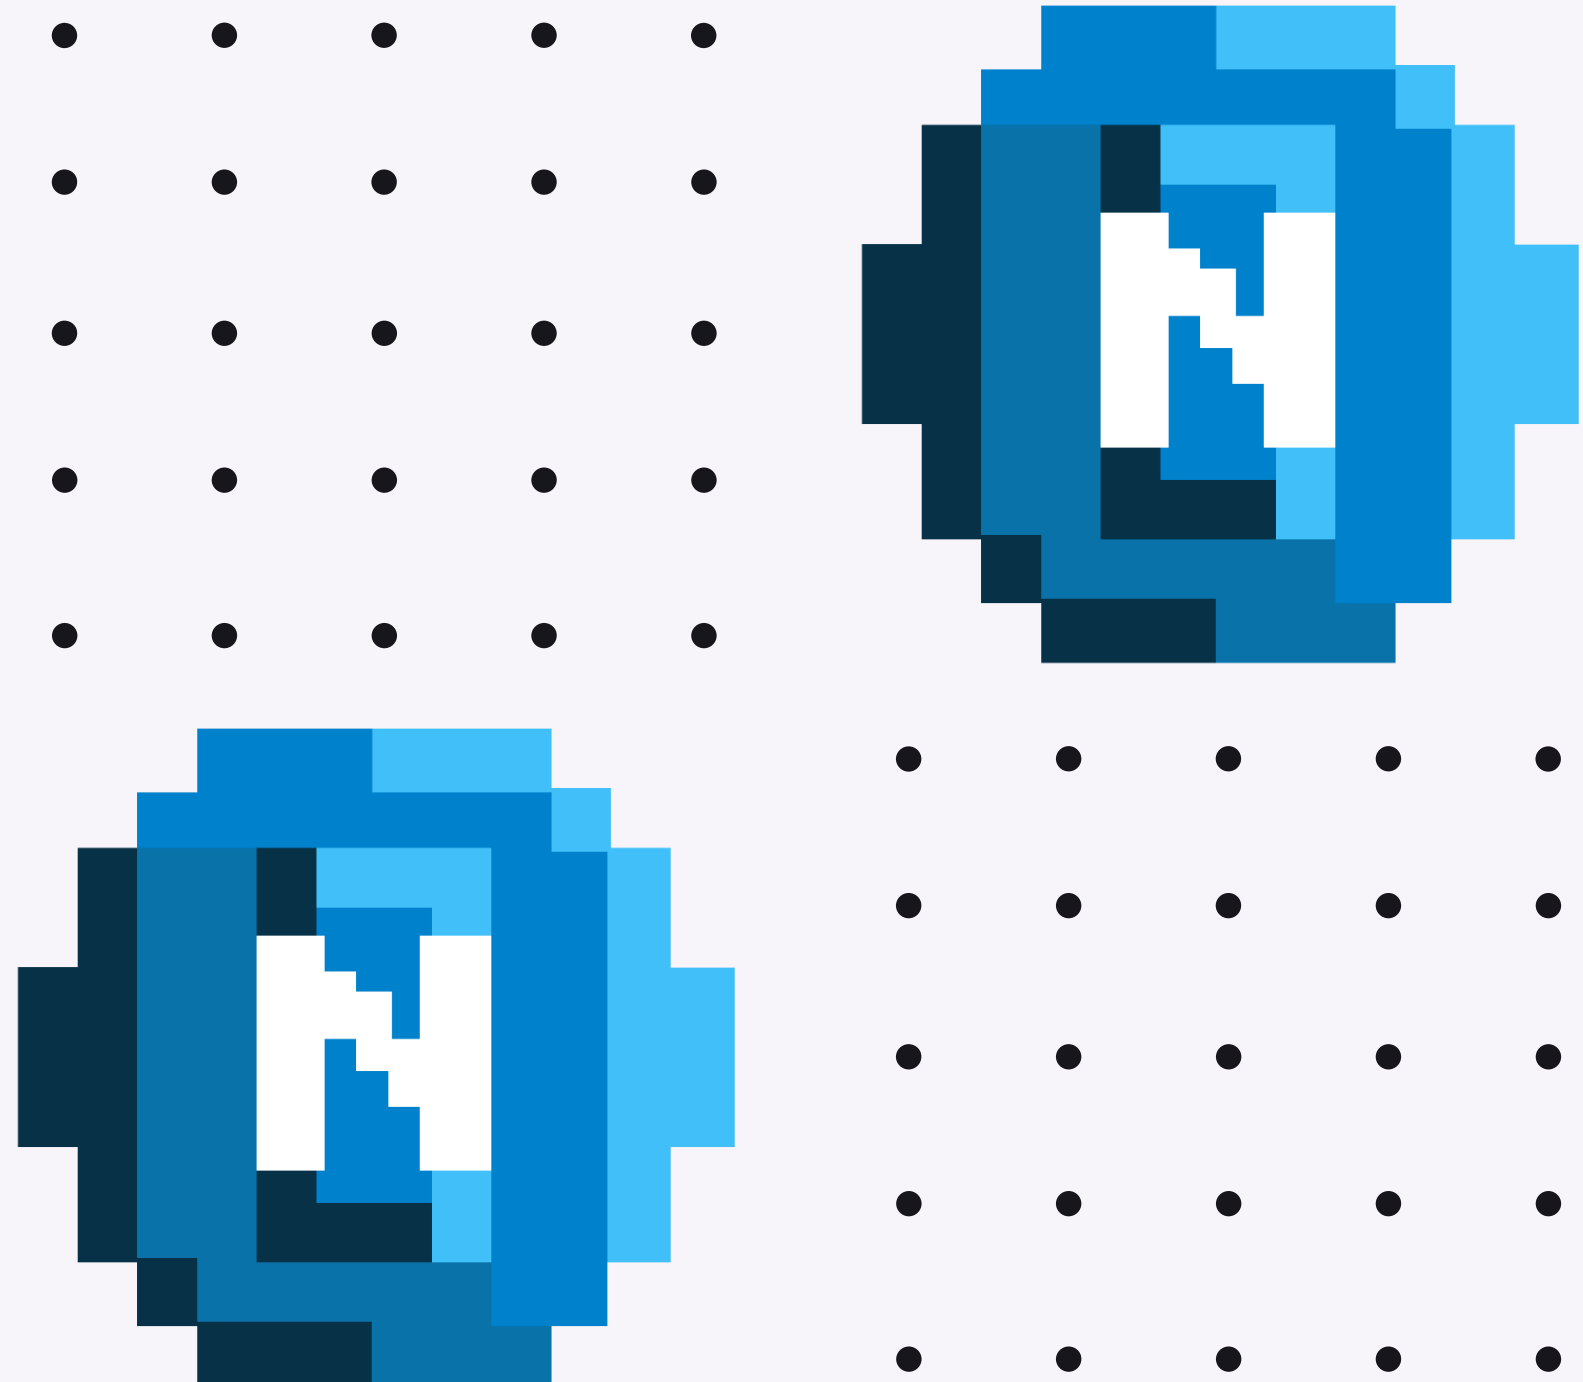

Goal

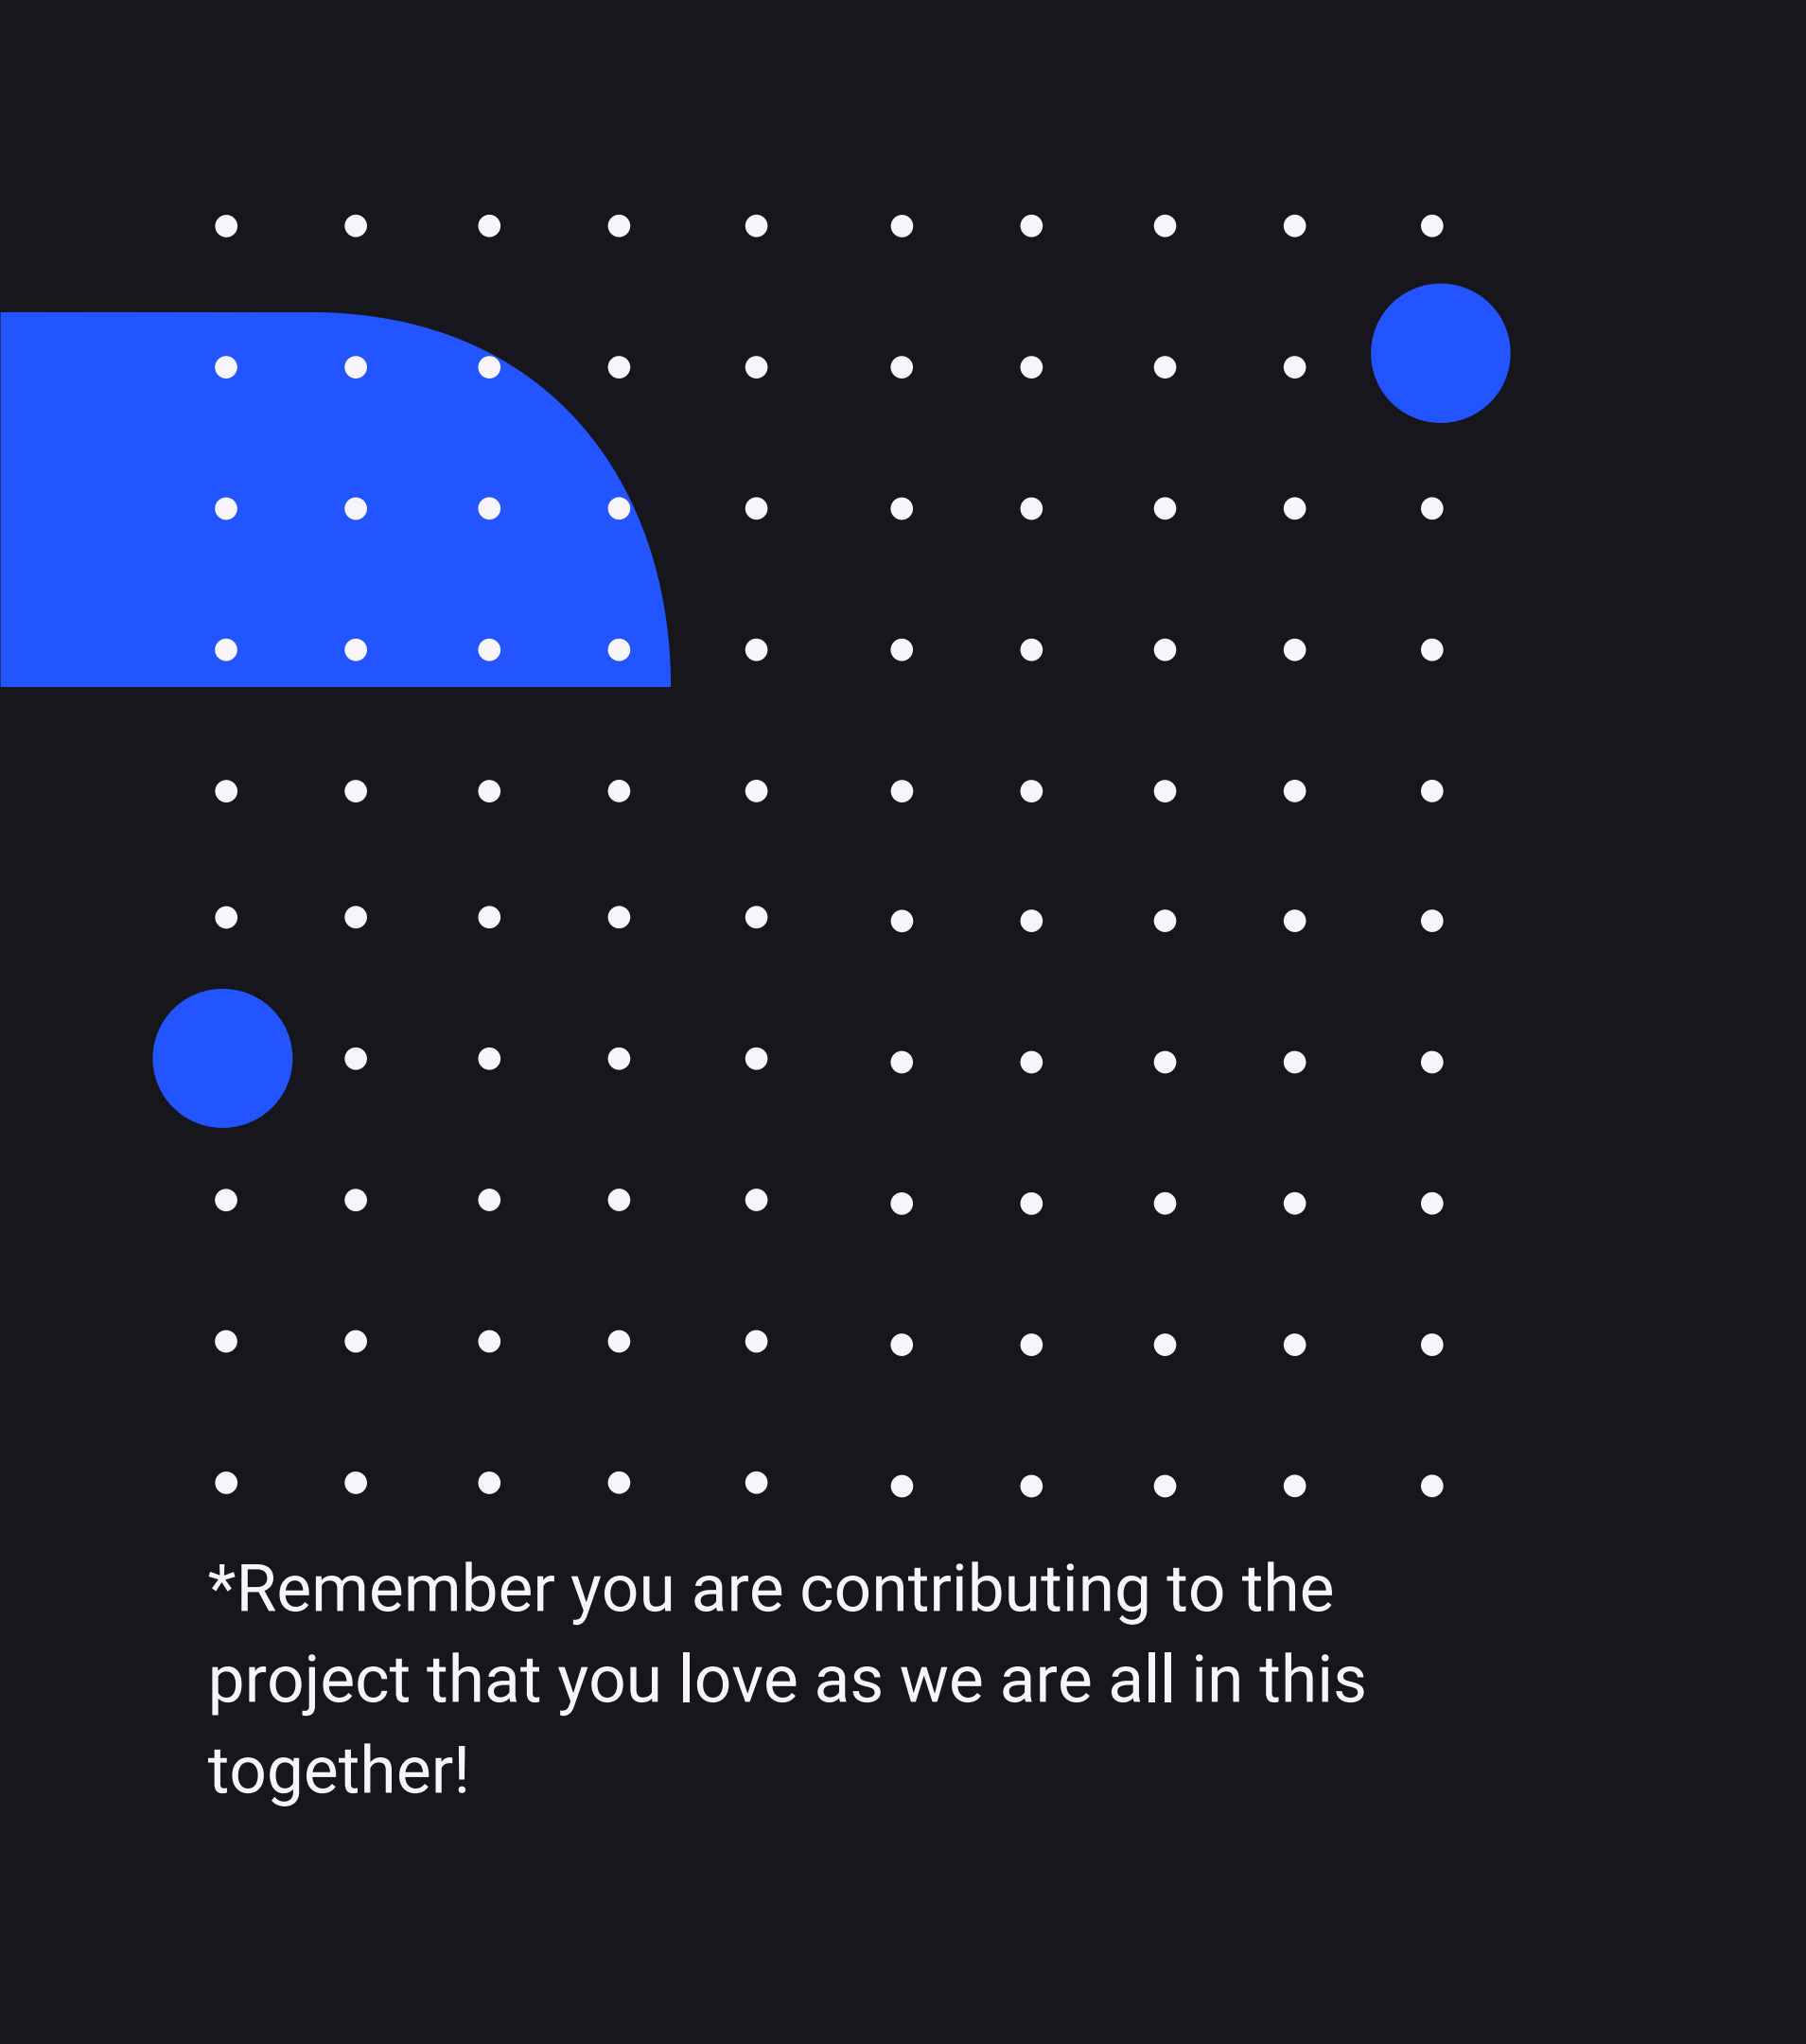

With the upcoming N3RD V2 release and the SmartVault in February, we are ramping up the marketing even more.

N3RD is already supported by many content creators (Twitter, YouTube, etc.). However, to be able to compete with the best, we suggest this community crowdfunding.

The goal is to attract some of the best and most professional YouTube creators and work with them long-term as N3RD is becoming the top product for 1-click passive investing.

We find that this would be a great move as N3RD is transitioning to a powerful decentralised VC.

*Remember you are contributing to the project that you love as we are all in this together!

Gathering as much ETH and N3RDz as possible (everybody can contribute as much as they want).

More negotiations with different content creators.

Massive V2 launch.

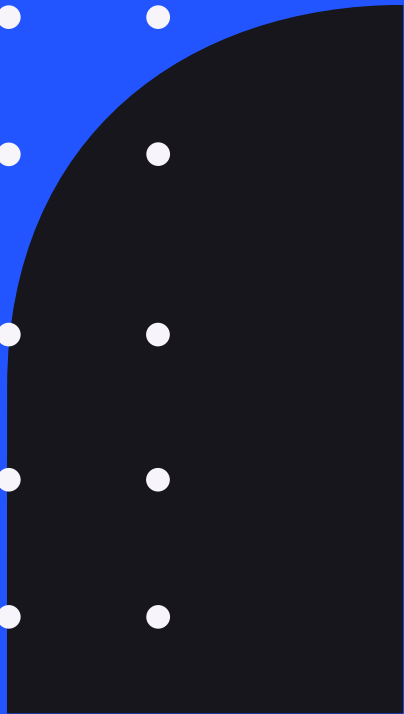

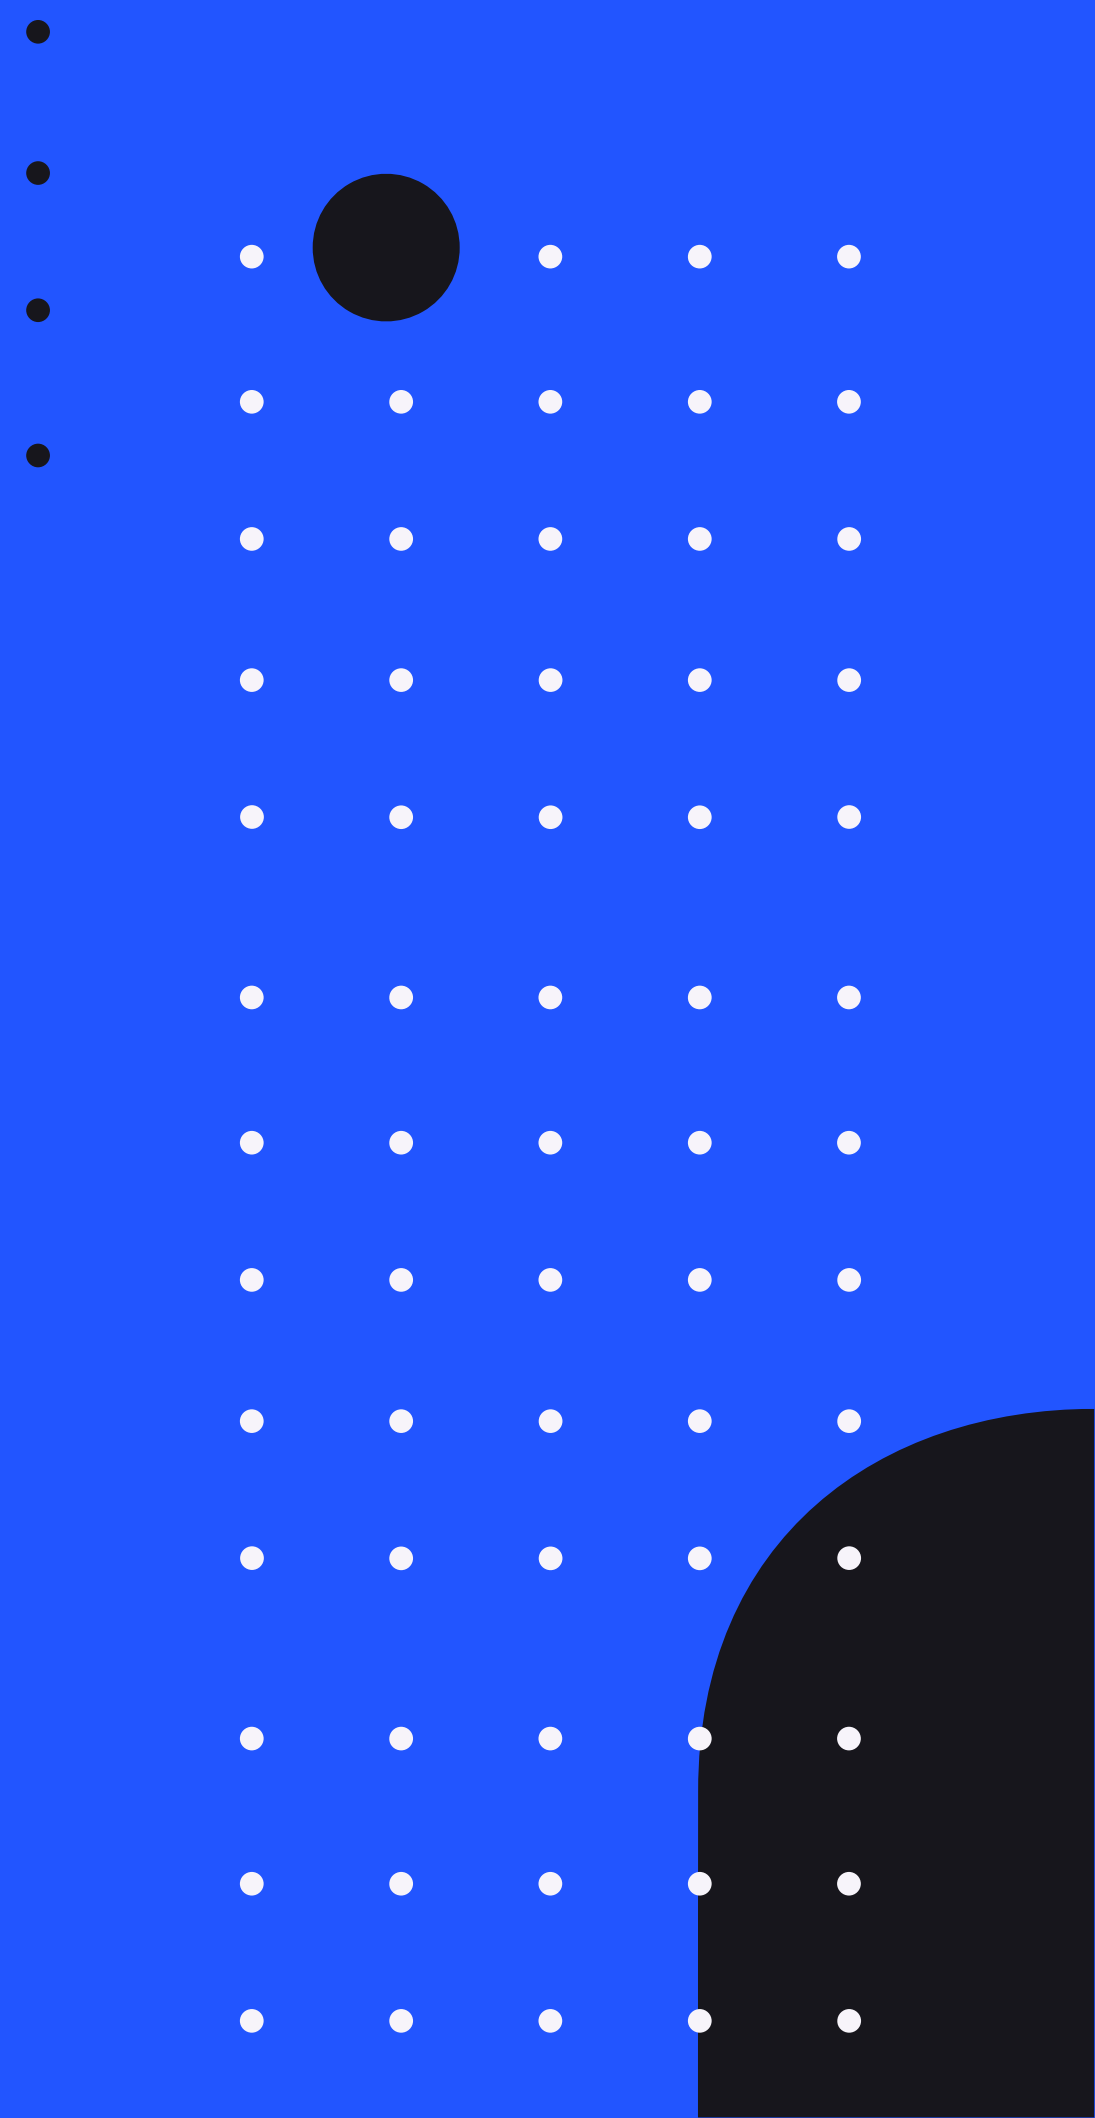

Moon.
